

Hello Guys,

You should develop a GUI application with python like below image:

The graphic can be different from the given example.

It should have 4 sections:

- 1) Receiver: Here you will put the email of the person you want send an email to him
- 2) Subject: The Subject of the email
- 3) Message: The message of the email should be sent to the receiver
- 4) Send: When you click on Send button it should send the message to the receiver with given Subject

You can use one of the GUI libraries of python.

Good Luck
