

Task 02 – Python Basics

The task is this, you should get the data from the below link

<https://gist.github.com/saltukalakus/124bba04327d8e5eab605d4fb66c53b8>

and save it in a dataframe and answer the below questions;

- ❖ How many users exist in the dataframe?
- ❖ How many emails verified in the dataset?
- ❖ Which IP has the most login counts?
- ❖ What is the user_id of the last logged user?

These conditions must be met in this task.

- 1) The code must be written in PEP8 style.
- 2) The url must be set in a config.ini file and cannot be inside the main code
- 3) Each step should be reported in a file.log file, utilizing logging library
- 4) The code must be commented clearly
- 5) All the errors of the code must be handled and reported in the log file.
